**VIDEO DOMAIN**

# NET iP

อุปกรณ์ที่จะทำให้กล้องวงจรปิดของคุณสามารถ
ออนไลน์ผ่านระบบอินเตอร์เน็ต WAN NETWORK
ไม่ว่าคุณที่อยู่ที่ไหนคุณก็สามารถตรวจสอบ
ความเคลื่อนไหวภายในบ้านของคุณ ได้ทั้งภาพและเสียง
พร้อมกับควบคุมอุปกรณ์ต่างๆได้อีกด้วย
ติดตั้งง่าย เพียงองค์กรของคุณมีอินเตอร์เน็ต ISDN
หรือ ADSL สำหรับเชื่อมต่อสาย LAN เข้าสู่ระบบเท่านั้น

เชื่อมต่อ
ผ่านอินเตอร์เน็ต

## Key Features

- Real Time quality Video and Audio transmission over digital Networks

- Multiple video compression formats optimizing the transmission quality of video streaming and stills images

- User selectable transmission rate for effective overall network performance

- Alarm storage and transmission of multiple high quality images

- Pre and post alarm image recording and management from multiple cameras at the same time

- High quality bi-directional audio transmission with AGC and echo cancellation

- PTZ camera management, supporting a wide variety of cameras

- Sophisticated programmable alarm inputs and relay outputs. Local, Remote or scheduled activation

- Connectivity through TCP/IP network, with optional backup communication channels (PSTN/ISDN/GSM)

- Our unique Video Integration Kit (VIK) enables full functional integration with existing or new Software Management Systems

**Video Domain Technologies** (VDT) develops and manufactures Digital Video/Audio Hardware and Software solutions for remote surveillance, alarm verification, virtual guard tours and event recording.

VDT's products utilize the latest cutting edge audio-visual technology.

VDT offers a full line of state-of-the-art digital video/audio, CCTV and remote surveillance systems including video motion detection, compression, digital recording and transmission.

## The Power Of The Visual Sensor

From contacts to motion detectors, the heart of a security system has always been the sensor.

The 21st Century sensor is video that reports not only that something happened but also visually tells the Central Station operators what happened. Customers and the dispatched authorities now have greater confidence in the installed security system and reporting service.

## The New Services

Verification is just the first opportunity for the security company to increase the value of their services to their customers. Video can effectively support and even replace guards and pay for itself while increasing recurring revenue for the security company. But video can ofer you more. It can help your customers manage their own businesses. Customers can now look in and look back at their Video Managed business. This can reduce shrinkage, record accidents, track entry and exits, and more.

## Monitored Video

Central Monitoring Station places trained operators on a 24 hour, 7 day a week on watch for events needing attention. Images from the protected premises are transmitted as an alarm, on schedule or when manually activated by an operator at the monitoring station.

Award Winning Technology
